

Subject index

Medical Economics, January through June, 1962

Each listing shows title of major article (asterisked) or short item. First two figures following title indicate date of issue; last figure indicates page number in that issue on which the article or item starts. Back copies of MEDICAL ECONOMICS may be purchased, as long as the supply lasts, at 60 cents each.

NOW ALSO IN **FLAVORED** FORM!

Antacid - Laxative - Lubricant to help correct constipation

Magnesium Hydroxide plus pure mineral oil make *Haley's M-O* a smooth working antacid-laxative-lubricant that efficaciously relieves constipation and attendant gastric hyperacidity.

The oil globules in *Haley's M-O* are minutely subdivided to assure uniform distribution and thorough mixture with intestinal contents. Oil leakage is thus avoided and a comfortable evacuation is effected through the stimulation of normal intestinal rhythm and blunted defecation reflex.

Protects the angina patient better than vasodilators alone

The coronary patient's anxiety about his condition can easily induce an anginal attack or, in myocardial infarction, can delay recovery.

This is why Miltrate gives better protection than vasodilators alone.

Miltrate contains PETN (pentaerythritol tetranitrate), acknowledged as basic therapy for long-acting vasodilation.

Miltrate also provides Miltown, a tranquilizer which, unlike phenobarbital, relieves tension without inducing daytime foginess.

Thus, your patient's cardiac reserve is protected against his concern about his condition; his arteries are dilated to enhance myocardial blood supply—and he can carry on normal activities more effectively.

THE MARCHING CHILDREN

How long would it take 500,000 children to pass through your office?

That's a tremendous army of patients—but it is the number of children under 14 whose lives you and your colleagues have saved since 1935 in just four diseases—tuberculosis, syphilis, influenza and pneumonia. And among working-age victims 2,000,000 are alive today who would not have survived if the 1935 death rate had remained constant.

In the past 25 years, new and potent drugs have played a significant role in reducing mortality from these diseases. Such an achievement results from the combined efforts of many organizations, professions and enterprises...including people working in medical and pharmaceutical research, production, and distribution, who make drug products available to doctors and dentists, hospitals and pharmacies, and to public and voluntary health agencies.

The prescription drug industry is proud of its role in this great work.

the challenge of urethral instrumentation:

"lower urinary tract instrumentation carries with it the risk of infection."¹

To meet the challenge, "... the use of nonantibiotics, such as ... Furadantin, to prevent urinary infection after such instrumentation as catheterization, cystoscopy and the passage of sounds, appears to be rational. Administration...beginning immediately after instrumentation and continuing for five to seven days should provide a poor culture medium for organisms that might have been carried inadvertently from the urethra into the bladder by a catheter or an instrument."²

In one recent study, *Pyrexia Following Cystoscopy*, "fifty-six patients received prophylactic antimicrobial agents and only 16 had fever. Forty-one patients did not receive any medication before cystoscopy, and 30 of these experienced fever after cystoscopy. . . . Nitrofurantoin [Furadantin] was employed more frequently than any other chemotherapeutic agent in the study. Ninety-three per cent of the organisms cultured from the urine prior to cystoscopy were sensitive to this agent when it was administered. In 21 per cent of patients who received nitrofurantoin prophylactically fever developed after cystoscopy, compared to 35 per cent of patients who received other agents, and 73 per cent of patients who did not receive any antimicrobial agents."¹

You get these results with help of Fostex

Acne lesions clear faster

Fostex is a more complete acne prescription because it contains 6 anti-acne agents... not just 1 or 2. These 6 agents, working together, provide essential actions necessary for local treatment of acne. ■ Fostex degreases, dries and peels and degerms acne skin. It helps remove blackheads, unblock pores, prevent pustules and scar-producing cysts, and rids the skin of bacteria. Fostex is easy to use. Instead of using soap, patients simply wash acne skin with Fostex Cream or Cake 2 to 3 times daily.

Only Fostex contains this unique combination of anti-acne agents: Sebulytic® (3 surface-active agents—sodium lauryl sulfoacetate, sodium alkyl aryl polyether sulfonate, sodium dioctyl sulfosuccinate), plus micro-pulverized sulfur 2%, salicylic acid 2% and hexachlorophene 1%. **Supplied**—Fostex Cake, bar form. Fostex Cream, 4.5 oz. jars. Also used as a therapeutic shampoo in dandruff and oily scalp which often accompanies acne.

MORE URINE

INCREASED WEIGHT LOSS

Naturetin has greater diuretic action^{1,3} than either chlorothiazide or hydrochlorothiazide. A trial with Naturetin demonstrates the increased urine volume and the greater weight loss it provides.

Moreover, the diuretic effect of Naturetin is controlled, sustained and gradual, a sharp contrast to the distressingly abrupt initial diuresis characteristic of shorter acting diuretics. Naturetin maintains a favorable urinary sodium-potassium excretion ratio.²

AVAILABLE: Naturetin 5 mg. and 2.5 mg. tablets. **ALSO AVAILABLE:** Naturetin \bar{K} (Squibb Bendroflumethiazide 5 mg. and 2.5 mg. capsule-shaped tablets, each with 500 mg. Potassium Chloride), for use when disease or concomitant therapy increases the risk of hypokalemia. For full information, see your Squibb Product Reference or Product Brief.
